SONOPAN'S SOUNDPROOFING SYSTEM IS THE EFFECTIVE WAY TO ENSURE A QUIETER HOME

Soundproofing improves quality of life for owners of condos, townhomes and semis.

LOUISEVILLE, QC – (2020) – If noise is disrupting enjoyment of your home, you're not alone. Soundproofing is becoming an important issue for homeowners, particularly those on opposite ends of the spectrum – first-time homebuyers and downsizing empty nesters. These buyers often purchase homes with walls shared with neighbouring units and later find unwanted noise travelling through walls and ceilings.

There is an easy solution. SONOPan soundproofing panels with NoiseStop Technology can help to make noisy neighbours and noisy traffic disappear. The panels are lightweight and simple to retrofit over existing walls and then adding a new layer of drywall.

Ben Flanagan, VP of Sales at Quebec-based MSL, says, "A noisy neighbour can turn the best townhome or condo into a nightmare. This unwanted noise could easily be addressed at the construction stage of a home but increasingly, it's the reason behind many home renovations. SONOPan is the easy, practical and effective solution no matter your noise problem."

SONOPan absorbs a wide range of frequencies and significantly reduces the transmission of sound and vibrations. Each lightweight panel is 4 by 8 feet and ¾-inch thick. SONOPan absorbs a wide range of frequencies and significantly reduces the transmission of sound and vibrations.

SONOPan is also environmentally friendly. It's constructed of 100% recycled wood fibre, is 100% recyclable and contains no formaldehydes or VOCs (volatile organic compounds) so it helps to improve air quality as well as quality of life.

For owners of condos, townhomes and semi-detached homes, SONOPan soundproofing panels with NoiseStop Technology are the answer. Ask for SONOPan at your local home renovation or building supply store. Find out more about your soundproofing options at www.sonopan.com – or see for yourself at a home show in your area.
